## ABSTRACT

This report presents tabulations of various tax data for all of Delaware's 26 school districts for the 1976-77 school year. Table 1 provides the assessed value of real estate and the number of capitations in each school district, as well as the tax rates for debt service, current expense, tuition, minor capital improvement, and total levies. Table 2 compares total taxes for each school district in the state. Table 3 estimates the tax collectible in each district from both real estate and capitation levies for debt service, current expense, tuition, and minor capital improvements. Table 4 provides the assessed valuation and full valuation of property in each district as of May 1976. Table 5 provides each district's assessed valuation per pupil, based on May 1976 assessments and September 30, 1975 enrollments. Table 6 provides each district's assessed valuations for the years 1972-73 through 1976-77. Table 7 compares each district's tax rates for 1975-76 and 1976-77. Table 8 projects for each district the impact of changes in real estate tax rates for schools on the owner of property assessed at \$20,000. Also included are a glossary of important terms and a description of the data collection procedures employed in the study. (JG)

## INTRODUCTION

As of July 1, 1976, there were twenty-six school districts, including the vocational-technical districts, in Delaware. This report provides a tabulation of tax rates levied, the value of property, and the estimated income from taxes in each of these districts for the 1976-77 school year.

Statutory limitations exempt certain persons from payment of real estate and/or capitation taxes; for example, persons over age 65 and the disabled. Furthermore, land used for specific purposes or owned by various tax exempt groups is not subject to taxation. (See particularly Delaware Code, Title 9, Chapters 81 and 83 for statements of legal exemptions.) Thus, for purposes of this report, the net assessed valuation of property, with legal exemptions deducted, is used throughout. This approach is consistent with Delaware Code, Title 14, Section 1902(a) which states in part:

Any district may . . . levy and collect additional taxes for school purposes upon the assessed value of all taxable real estate in such district, except taxable real estate which is exempt from County taxation, as determined and fixed for County tax purposes.

The reader is advised to exercise caution in use of the data presented in Table 3. This table which provides estimates of taxes collectible may be in error for two reasons. Failure of a district to collect all available taxes due to delinquencies may reduce the actual amounts collected below those estimated. Conversely, if a district collects delinquent taxes from prior years during fiscal 1977, the amount of taxes actually collected could exceed the estimated amounts provided in Table 3.

## DEFINITIONS

### Assessed Valuation

The value of real estate, including trailers, for purposes of taxation as determined by a County assessor. In Delaware, this assessed value is less than the market or true value of the property and this ratio between assessed value and market value varies by county. In this report, the assessed valuation reported is a net figure after all legal exemptions have been deducted. Assessments of properties in the three counties went on the books in the following years: New Castle, 1973; Kent, 1966; Sussex, 1956.

### Full Valuation

The value of real estate as defined by Delaware Code, Title 14, Section 1707- (b)(5) which states:

'Total full valuation' means the total assessed valuation of taxable real property as increased by the percentage factor, if any, by which the appraisal used for assessed valuation was reduced in order to obtain the final valuation for assessment purposes. For the fiscal year immediately following reassessment in any county, 'total full valuation' for that county shall be determined by multiplying 1.10 times the total full valuation as of July 1 for the fiscal year immediately preceding reassessment. Thereafter, the increase in the total full valuation in that county shall be added to the adjusted total full valuation each year.

Thus, the full valuation of property in each of the three counties is computed using the following formulae:

$$\begin{aligned} \text{New Castle: Full Value } 1976-77 &= \frac{1972-73 \text{ Assessed Value}}{.70} \times 1.10 \\ &+ \frac{1976-77 \text{ Assessed Value} - 1973-74 \text{ Assessed Value}}{.70} \end{aligned}$$

$$\text{Kent: Full Value } 1976-77 = \frac{1976-77 \text{ Assessed Value}}{.60}$$

$$\text{Sussex: Full Value } 1976-77 = \frac{1976-77 \text{ Assessed Value}}{.50}$$

The full valuation of property in districts which cross county boundaries is computed by determining the full value of real estate in each county independently and then summing the results.

#### Real Estate Tax Rate

The rate at which property is taxed. In this report, all rates are tabulated per \$100 of assessed valuation. For example in Table 1, the total rate levied in Alexis I. duPont is \$1.24 which means that the owner of property assessed at \$100 would be liable for a tax of \$1.24.

#### Per Capita Tax

A tax levied on residents of a school district, 18 or more years of age. Such a tax is levied equally on all such residents regardless of ownership of property.

#### Combined Tax Rate per \$100 Assessed Valuation

This rate is computed by summing the taxes collectible from real estate taxes and capitation taxes and then dividing the sum by the assessed valuation. The result is reported to the nearest fourth decimal place.

### Combined Tax Rate \$100 Full Valuation

This rate is computed by summing the taxes collectible from real estate taxes and capitation taxes and then dividing the sum by the full valuation. The result is reported to the nearest fourth decimal place.

### Current Expense

Expenditures or rates of tax levied to collect revenues for current operations of the schools. As used in this report, the term excludes funds collected for purposes of capital outlay, debt service, minor capital improvements, and tuition.

### Debt Service

Expenditures or rates of tax levied to collect revenues for the retirement of long-term debt or interest on the debt.

### Tuition

Expenditures or rates of tax levied to collect revenues for the payment of tuition for students attending special schools. In Delaware, this tax is levied by school board action without referendum.

### Minor Capital Improvements

Expenditures or rates of tax levied to collect the school district share of the funds required for minor improvements to the district's physical plant. In Delaware, this tax is levied by school board action without referendum.

## PROCEDURES

The following procedures were employed in obtaining the required data and preparing the tabulations contained in this report.

- \* A survey form requesting the assessed valuation of property, the number of capitations, and the tax rates was sent to each school district in the state.
- \* The assessed valuations, as reported by the local districts, were compared to tabulations supplied by the three county assessment offices. Two exceptions were noted and in each case, the district supplied data were used. In Smyrna, the district supplied figure included an adjustment for farmland assessment and in Wilmington, the City assessment was used.
- \* The total assessment for each county was next obtained by summing the assessed valuation of all districts or parts of districts located in the county. The figures thus derived were used as the assessed valuation of the three county vocational-technical districts.

- \* The full valuations for the districts were computed using the formulae given on page 2 and were then tabulated in Table 4.
- \* Finally, the remaining computations and tabulations were prepared using the definitions contained on pages 1, 2, and 3.

## FINDINGS

Table 1 provides the assessed value of real estate and the number of capitulations in each school district, as well as the tax rates on real estate and capitation taxes for debt service, current expense, tuition, minor capital improvement, and total levies. All regular school districts levy a real estate tax for debt service; these rates range from \$.05 to \$.55 per \$100 of assessed valuation. All districts levy a real estate tax for current operations; excluding the vocational districts, rates range from \$.462 to \$2.523 per \$100 of assessed valuation. Only nine of the twenty-six districts levy capitation taxes; with one exception the funds are used for debt service and current operations. Capitation taxes range from \$5.00 to \$18.90 per capita. Total levies on real estate, excluding the vocational districts, range from \$.72 to \$2.795 per \$100 of assessed valuation.

Table 2 affords a comparison of total tax between school districts in the state. The total tax collectible from real estate and capitation levies are first computed and summed for each district. These sums are then divided by the assessed valuation and by the full valuation, respectively, to compute a single equivalent real estate rate. In districts which levy no capitation taxes, the rates per \$100 of assessed valuation will be the same as those given in Table 1. The results displayed in Table 2 indicate that combined tax effort varies from \$.8412 to \$2.795 per \$100 of assessed valuation or from \$.4206 to \$2.2312 per \$100 of full valuation. This suggests the overall local tax effort varies statewide in a ratio of about 5 to 1, i.e., the district levying the highest rate has a rate five times as great as the lowest one.

Table 3 provides an estimate of tax collectible from both real estate and capitation levies for debt service, current expense, tuition, and minor capital improvements. It should be noted that these are estimates assuming 100% collection; delinquencies or collections from prior years could result in actual receipts below or above the estimated figures. The total tax revenues, including those for vocational schools, are expected to exceed \$51,200,000 in fiscal year 1977. Of this total, about \$41,600,000 (81%) is earmarked for current operations and about \$7,700,000 (15%) is to be used for debt service.

Table 4 provides a tabulation of assessed and full valuation of property in each school district as of May 1976. The full valuation is computed using the formulae given on page 2.

Table 5 provides a tabulation of the assessed valuation per pupil by district based on the May 1976 assessments and the September 30, 1975 enrollments. It thus provides a comparison between districts of the real property that can be taxed to provide funds for the schools on a per pupil

basis. The statewide average is \$25,720 per pupil, but the assessed valuation per pupil ranges from \$10,243 in Laurel to a high of \$65,384 in Alexis I. duPont.

Table 6 provides the assessed valuations for the districts from the years 1972-73 through 1976-77. The total statewide assessment in 1976-77 is \$3,232,976,873 which represents an increase of over \$98,000,000 or about 3.1 percent from 1975-76. Approximately 78 percent of the assessed valuation is located in New Castle County districts with the remainder nearly equally split between districts located in Kent and Sussex Counties.

Table 7 provides a comparison of tax rates for the 1975-76 and 1976-77 school years. The table provides comparisons of current expense, debt service, and total tax levies; the latter includes minor capital improvement rates and tuition rates. A review of the data presented indicate that:

- \* Debt service rates decreased in seventeen districts, increased in three districts, and remained unchanged in three districts.
- \* Current expense rates increased in four regular school districts, decreased in two districts, and remained unchanged in seventeen districts. In addition, the rates in all three vocational districts increased as a result of SB575 of the 128th General Assembly.
- \* Total real estate levies increased in six regular school districts, decreased in ten districts, and remained unchanged in seven districts. As noted above, the total levy in all three vocational districts increased.

Table 8 provides a projection of the impact of changes in the total real estate tax rates for schools on the owner of property assessed at \$20,000. The rate change given is the sum of the rate changes for the regular school district plus the vocational district. The second column shows the change in school taxes to be paid by the owners of property assessed at \$20,000 located in each of the school districts. Changes range from a decrease of \$14.80 to an increase of \$33.40. If the changes in tax rates are weighted on the basis of the assessed valuation on which they are levied, the average statewide total school tax levy, including the vocational districts, increased by about \$.0567 per \$100 assessed valuation. That is, the owner of a piece of real estate assessed at \$20,000 will pay about \$11.34 more in school taxes in 1976-77 than in 1975-76.
